Version 1.0 | Published 20 July 2026

[START HERE](#)

Contents and quick contacts

Keep this guide on your phone and save the verified emergency numbers before you need them.

[03 Understanding the Pilot](#)[04 Emergency reporting](#)[05 Standard reporting](#)[06 Location permissions](#)[07 Campus safety checklist](#)[08 Case tracking and notifications](#)[09 Privacy, consent and evidence](#)[10 Pilot reviews](#)[11 Support contacts](#)[12 Quick reference and QR access](#)

Actual emergency - use verified services

Cellphone emergency 112 • SAPS 10111 • Ambulance / fire 10177 • TUT Contact Centre 086 110 2421. The Pilot itself does not dispatch an emergency response.

PILOT BOUNDARIES

Use My CCSF with confidence

The Pilot can

Create isolated test reports, capture readable locations, attach test evidence, show case progress, deliver staff notifications and collect structured reviews.

The Pilot cannot

Replace Campus Protection Services authority, SAPS, ambulance services, medical care, disciplinary procedures or established emergency contact processes.

1

Authenticate

Your account, Pilot participant and campus are verified before the workflow opens.

2

Report

The server routes the case to the correct campus queue; students do not choose an administrator.

3

Respond

Authorised staff assess, assign, update and complete only the isolated Pilot case.

4

Review

Students provide structured feedback and can read authorised moderation responses.

Core rule

For a real, immediate threat, call verified emergency services first. Use the Pilot only for the authorised test programme.

EMERGENCY TEST

Location + consent + submit

The emergency workflow is intentionally short so the student is not forced to complete a long questionnaire.

Required

Current location Readable location result Consent to share location and registered profile

Not required

Incident title Written explanation Category selection Attachment or detailed questionnaire

What happens automatically

- The authenticated student identity, student number, phone, email and campus are attached from the registered profile.
- A default emergency title and description are created by the approved workflow.
- The readable location, coordinates and accuracy are stored with the case.
- The case appears in the authorised campus-security Pilot queue and remains visible to super-admin oversight.

Consent statement

Only submit after reading the notice that the Pilot does not contact CPS, SAPS, an ambulance or another external emergency service. For an actual emergency, call 112, 10111 or 10177.

REPORT CLEARLY

The seven-part standard report

A strong report helps authorised staff understand the test scenario without guessing.

1

Choose the workflow

Select the authorised scenario that matches the Pilot test.

2

Write a clear title

Use a short factual description of the incident type.

3

Explain what happened

Include relevant sequence, people involved and immediate risks.

4

Confirm the location

Use the readable building, gate, residence, street or landmark.

5

Add safe evidence

Upload only relevant test files and never put yourself at risk.

6

Submit and save reference

Keep the case reference for tracking and staff communication.

7

Follow the timeline

Read status changes and authorised notifications before creating a duplicate.

Evidence principle

Preserve relevance, privacy and victim dignity. Do not upload unrelated documents, rumours or material captured through unsafe behaviour.

LOCATION GUIDE

Share location deliberately

The system requests a high-accuracy position first and may use a network fallback when the device cannot obtain it.

1

Open the secure site

Use the HTTPS Pilot link. Location may fail on an insecure browser session.

2

Allow the prompt

Grant location permission only when the authorised reporting or location test requires it.

3

Review the result

Check the readable address and the accuracy estimate before submitting.

4

Correct context

For standard reports, add the building, gate, residence or landmark when needed.

5

Stop live tracking

End the authorised tracking scenario when the test is complete.

If location fails

Turn on device location services, allow site permission, enable mobile data or Wi-Fi, move to a clearer signal area and retry. Never invent coordinates.

Privacy note

The readable description supports the student experience. Coordinates and accuracy remain technical evidence available only through authorised Pilot access controls.

DAILY SAFETY

Simple actions that reduce risk

Safety works best when students report early, protect evidence and follow verified institutional processes.

Personal movement

- Use well-lit familiar routes.
- Tell someone when travelling late.
- Avoid isolated shortcuts and distractions.

Valuables and access

- Keep phones and laptops concealed.
- Lock rooms, windows and vehicles.
- Do not lend access cards or keys.

Residence safety

- Follow visitor and access rules.
- Report broken locks or lights early.
- Challenge no one; contact authorised staff.

Vehicle and event safety

- Keep emergency lanes clear.
- Respect pedestrian and parking controls.
- Know exits and avoid unsafe crowd pressure.

Digital and evidence safety

- Do not publish victim identities.
- Avoid forwarding rumours or unverified claims.
- Preserve original evidence for authorised review.

WIL and off-campus activity

- Know the workplace emergency procedure.
- Use approved contacts and reporting channels.
- Record clear location and contact details.

Never investigate or confront

CCSF supports awareness and accurate reporting. Student members and app users must not enforce, pursue suspects, publicly name people or interfere with CPS/SAPS work.

MY CASES

Understand every status

Tap the complete case card to see the reference, readable location, evidence, assigned staff member, timeline and notifications.

1

Received

The report entered the authorised campus queue.

2

Assessing

A staff member is reviewing the submitted information.

3

Assigned

An authorised staff member accepted responsibility for the Pilot case.

4

In Progress

The simulated response workflow is active.

5

Resolved / Completed

The authorised Pilot simulation has been completed.

Notifications

Unread staff updates appear in Support and remain linked to your account. Read the full case timeline before submitting a duplicate report or review.

PRIVACY

Share only what is necessary

The Pilot uses isolated data controls, but students must still avoid unnecessary personal information and unsafe evidence collection.

1

Purpose limitation

Use information only for the authorised Pilot reporting, response or review workflow.

2

Minimum necessary data

Include relevant facts and avoid unrelated personal records, medical details or private messages.

3

Victim dignity

Do not publish names, images, accusations or identifying details on social media.

4

Private evidence

Pilot report attachments and review screenshots are accessed through controlled private storage.

5

Emergency consent

The emergency form asks permission to share current location and the registered student profile with authorised Pilot staff.

6

Retention and audit

Programme retention, deletion and moderation actions remain subject to controlled audit processes.

Before uploading

Ask: Is this relevant? Is it safe to capture? Does it expose someone unnecessarily? Would I be comfortable explaining why authorised staff need it?

REVIEWS

Rate, explain and follow up

Reviews are for Pilot usability and service feedback. They do not replace an incident report or emergency contact.

Quick feedback

Choose cards such as Easy to use, Location worked correctly, App was slow or I found a broken feature. The form remains editable.

Written review

Add a 1-5 star rating, category, explanation, optional related case, optional private screenshot and contact permission.

Review lifecycle

Submitted

Your review is saved.

Under review

Authorised staff are assessing it.

Responded

A staff reply is available.

Resolved

The review workflow is complete.

Flagged / Hidden

Moderation controls protect the Pilot environment.

Write useful feedback

State what you tried, what happened, which device or browser you used and what improvement would make the workflow clearer or safer.

EMERGENCY CONTACTS

Save these numbers now

A real emergency requires direct contact with verified services. The Pilot does not dispatch an emergency response.

112

Cellphone emergency

General emergency routing from a mobile phone in South Africa.

10111

SAPS emergency

Police emergencies and crimes in progress.

10177

Ambulance / fire

Medical emergencies, fire and rescue services.

086 110 2421

TUT Contact Centre

Official university contact and verification channel.

0800 428 428

GBV Command Centre

National support and referral for gender-based violence.

Campus-specific CPS contact

Use the campus number displayed through verified TUT or My CCSF channels. Confirm numbers before sharing them, because campus contact arrangements may change.

QUICK REFERENCE

Report safely. Track clearly. Escalate correctly.

Use this page as the final check before you submit or respond to a Pilot workflow.

REAL EMERGENCY

Call 112, 10111 or 10177 first.

EMERGENCY TEST

Share location, read consent, submit.

STANDARD REPORT

Describe, locate, attach safely, save reference.

CASE TRACKING

Open My Cases and read the timeline.

PRIVACY

Share only relevant information and protect dignity.

REVIEWS

Rate the Pilot and explain what should improve.
